EDUCATIONAL ORG Website

Overwiew:

This is going to be a webpage of an educational organization. Using Bootstrap 4, we can create a resplendent official webpage of an educational institution which would show up various activities the college carries out, along with other details such as infrastructure, placements in the college, history of the college, why should people join this college and in what way they are better than other organizations.

Features:

• A **home page** where there are details of the latest activities and announcements.

• **Vision and Mission** of the organization.

• Various **departments** of the organization.

• **Student login** where the students can get notes of various subjects, submit their assignments and they can also view the courses they have enrolled in.

• **Faculty login** where the faculty can upload the marks of the assignments, check the attendance of the students and analyse the students' performance

• **Support** for all the members of the organization to solve their problems

Design and Implementation:

The design is based on Bootstrap4 along with css and a little javascript.

The website is basically divided into three different webpages: Home, About Us and Courses.

The home page consists of details about the educational organization, along with contact details.

The About Us page consists of things like Vision and Mission and how this organization is different from other institutions.

The tools that I used to design the UI are Wireframe.cc, proto.io.

The bootstrap classes made it a lot more easier to implement different designs and elements of the webpage.

I have used the Bootstrap4 modules along with font awesome classes to make the page look better and to make the page responsive.

I have also included the jquery files to add javascript functionality especially for the modals and carousel.
